Torpedo Studio Error List

This page lists the error that can occur in the firmware of the Torpedo Studio. You can refer to the following table to learn more about an error, and, in some case, how to solve the issue. If you need further assistance, please contact us through the Two notes Help Desk.

This page is a work in progress. If you get an error that is not described here, please let us know through the Two notes Help Desk.

Error #	Description
13 / 0	Boot error, usually linked to a hardware fault.
62 / 0	Error when checking the written file. Restart the unit : if the file name is ok, you can ignore this error. If the file is corrupted, delete it and try writing it again.
107 / x	'Autosave' memory not recognized. Restarting the unit should automatically fix the issue, but may lead to other 'autosave' errors.
